

Preliminary 2021 Results

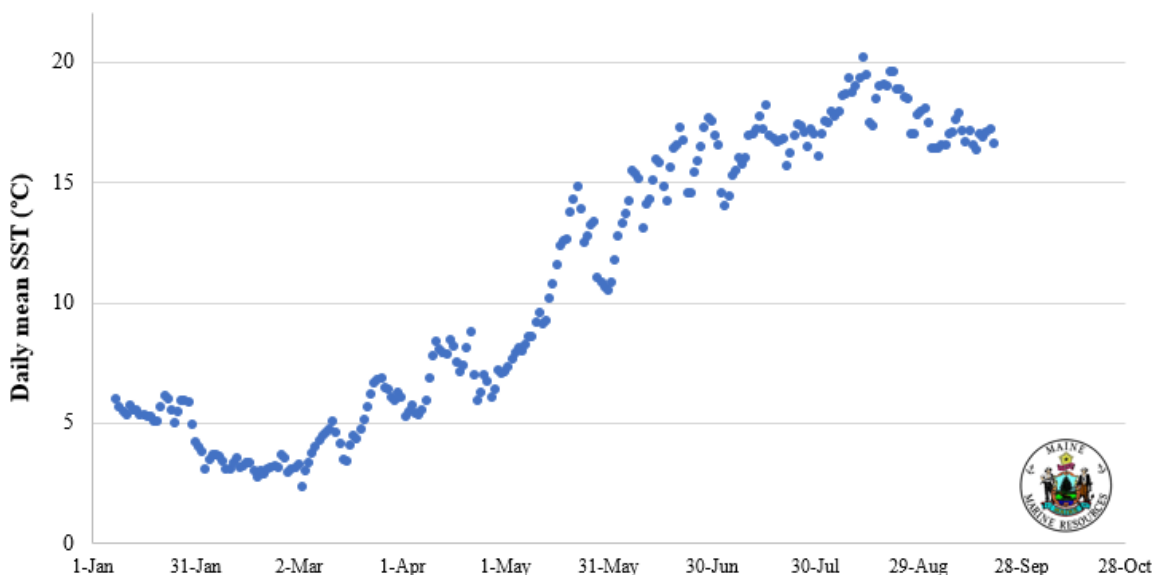

Figure 1. 2021 mean daily sea surface temperature (SST) as of September 20, 2021 at the Maine Department of Marine Resources Environmental Monitoring Program. The sea surface temperature sensor (Campbell Scientific 109) is located at -5.5 feet MLW (relative to mean low water).

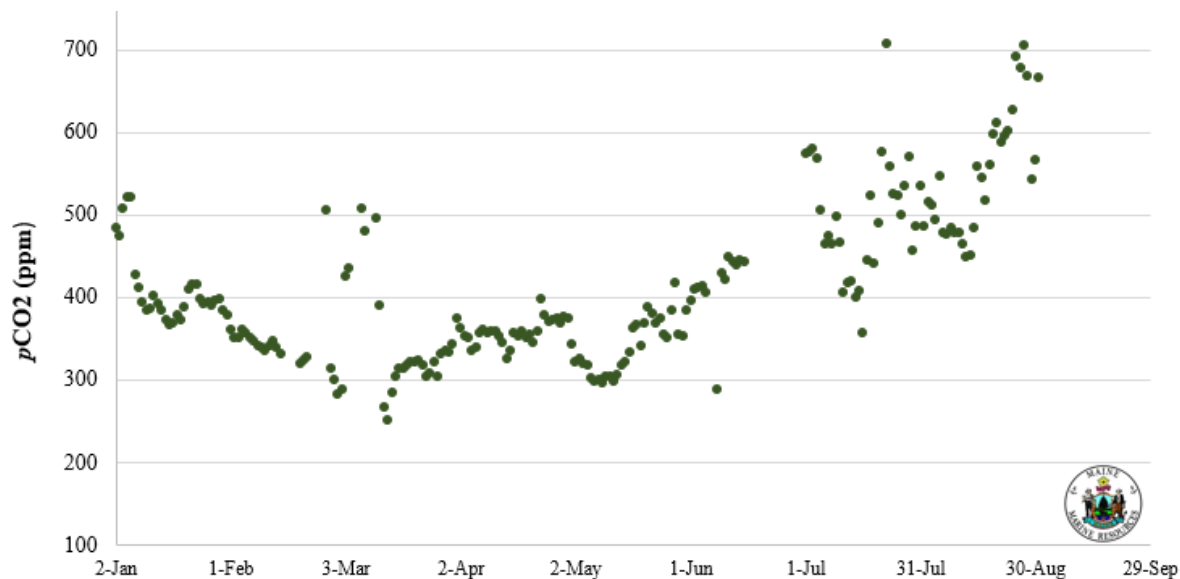

Figure 2. 2021 mean raw daily partial pressure of carbon dioxide ($p\text{CO}_2$) as of August 30, 2021 at the Maine Department of Marine Resources Environmental Monitoring Program. The sensor (Turner C-Sense) is deployed in a cage on the bottom. *These data are not temperature corrected. Please reach out to DMR staff for these data.
